SECTION 3 - Hazards Identification
Health Hazards:

-Acute, Corrosive to skin, eyes, and mucous membranes.

-Chronic, Kidney and liver Damage possible.

-Acute, Ingestion of liquid is corrosive to mouth, throat, stomach, esophagus, and decomposes releasing carbon dioxide upon contact with stomach acid. Swallowing the liquid burns the tissues, causing abdominal pain, nausea, vomiting, diarrhea and collapse. Swallowing large quantities can cause death.

-Eye contact causes painful stinging or burning of eyes and lids, watering of eyes, conjunctivitis, opaqueness of cornea, possibly leading to loss of sight.

Primary routes of Entry:

Inhalation.....Corrosive

Skin.....Corrosive

Ingestion.....Corrosive

Over Exposure Effects:

INHALATION: Exposure to vapor, mist or liquid can produce severe irritation or burns of the respiratory tract. Severe exposures could result in chemical pneumonia.

EYES: Contact with eyes can cause severe damage, including burns and blindness. The severity of the effects depends on the concentration and how soon after exposure the eyes are washed.

SKIN: Corrosive. Prolonged or repeated contact, even to dilute concentrations, can cause a high degree of tissue damage. Irritation or burns of the skin may be delayed from initial contact. The severity of the tissue damage, depend on the exposure time.

INGESTION: Corrosive. Causes severe burns and complete tissue perforation of mucous membranes of the mouth, throat and stomach.

Carcinogenicity:

NTP.....Yes

IARC.....Yes

OSHA.....No
